

## Funktion adds one more

**UK** audio manufacturer Funktion One has added a new rental company to its UK Rental Network.

The newly formed partnership between Steven Ward and David 'Steedsy' Stevenson took delivery of their first Resolution 4 Touring system last month. Powered by MC2 amplifiers and XTA loudspeaker management system, the rig was out on hire for the first time within days at a local charity event.

"Steedsy and I had worked together 20 years ago, before both going on to having successful businesses out with the entertainment industry. However, we had both been dabbling in sound hire and kept up with developments in technology," explained Ward.

"Following on from a meeting over a year ago we decided to form a pro sound and lighting hire company. After a trip to PLASA, we set our sights on a Funktion One system. There was an obvious gap in the market for Funktion One in Central Scotland, so

we contacted David Bruml and flew down for a day at their headquarters early in December. We decided on starting with a basic Res 4 touring system with the new F I21 cabinets for the bass and intend to add to the system in due course."

"When we went to PLASA we were impressed by the immense clarity and power of Funktion One's systems,"

added Stevenson. "Our subsequent trip to their research and development site further convinced us that they were the company we wanted to be working with. I am looking forward to working with the Res 4 system and other Funktion One products we intend to invest in."

## MC2 takes Korea opportunities

Wide variety of sectors opt for T and E series amps through local distributor, Soundus

**KOREAN** pro-audio supplier Soundus has provided several projects for the church, education, leisure and industrial sectors with MC2 T series and E series amplifiers.

As exclusive distributor for MC2 in South Korea, Soundus has supplied its

partner Media House with E15, E25, E45, T1000 and T4-250 amplifiers to power Funktion-One Resolution speakers at the Jung-Ang church in Dae-Gu city.

Additionally, Media House has supplied E15 and E25 amps for the redecoration of the worship hall at

Dong-Kwang church in Seoul city. The T series MC2 amps are also running the Funktion-One speakers throughout a much larger installation in the SuDong church, also in Seoul city.

Further to Media House's church installations, it has placed MC2 amps in Hyundai-Daimos in the Seosan province. As part of the Hyundai group, Daimos supplies auto parts to Hyundai Motors. The T and E Series are in place to drive the SLS loudspeakers in Daimos' banqueting hall.

Rolling Hills Resort, also in Seosan, serves as a training facility and recreational centre for Hyundai's employees. Both of the MC2 series' are set up to power Resolution speakers at Rolling Hills, a project completed by Soundus and Misung.

After being commissioned directly by A-JU University in the Kyung-Gi

province, Soundus supplied one E25 and five E15 amps to power its SLS loudspeakers.

"MC2 Audio amps are perfectly matched with Funktion-One speakers and luckily, Soundus is a distributor for both brands. I think we're lucky to have these excellent products in our portfolio.

"Whenever we design a sound system we suggest Funktion-One speakers and MC2 Audio amplifiers to the customers and dealers," said Ho-rang Baek of Soundus, a local brand manager for MC2 Audio.

"Also, we are extremely satisfied with the sound made by MC2 Audio amps. The mid-high is very clear with a warm mid-low range and our customers are very satisfied with the resulting high quality sound."
