This mounting bracket set works in a "hook and hang" arrangement, where the hooks on the Ceiling / Wall Plate engage with the slots in the Cabinet Plate.
For assembly, please follow these two steps:

Step 1. Secure the Cabinet Plate to the top or the back of the cabinet, depending on whether the loudspeaker is to be ceiling or wall mounted.

If ceiling mounting, the plate's captive nuts should be at the rear of the cabinet. If wall mounting the captive nuts should be at the bottom of the cabinet.

The plate is secured to the cabinet using four M10 x 35 hex bolts, split washers and large c-form washers.

Please take note from the diagram, the order in which these are placed.

Go to Page 2 for Step 2.

cabinet to the Ceiling
Plate

Direction of lift/push
when mating the
cabinet to the Wall
Plate

Step 2. Fitting the Cabinet onto the Wall / Ceiling Plate

Fully Assembled - Visual of how plates fit together when
secured against ceiling or wall

Step 2. Secure the Ceiling / Wall plate to the ceiling or the wall with appropriate fixings.

Lift the cabinet so that the hooks engage with the slots and then push in the appropriate direction to allow the cabinet to hang on the plate's hooks.
Secure the two plates together, to prevent rattle, by tightening the two M6 x 20 Allen Head bolts at the accessible end of the plates. A long necked Allen Key will be required for this function.
Please Note:

- If mounting the Ceiling / Wall Plate against an uneven surface be sure to avoid deforming the plate when tightening the bolts as this may result in the assembly not working.
- When mounting the loudspeaker against or close to the wall remember that the cable needs to be connected before securing the cabinet.
- When wall mounting, be sure to leave space between the top of the plate and the ceiling to allow the cabinet to "drop" into the plate.

These diagrams show configurations for **both** *wall mounting and ceiling mounting. Only one configuration is possible and necessary when deploying the loudspeaker.*
